Ops OKR pack - September 2026

8th edition · generated 2026-10-11 · from snapshot_2026-10-11.json

Operations: 75.6% (3 of 5 objectives scored; OO1 is Finance's and is excluded)

OO1 - 7% Net Profit: no % published (0 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Actual W/R% (20%)	per sheet	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR2 Actual FR% (35%)	per sheet	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR3 Actual V/R% (13%)	per sheet	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR4 Actual NP% (4-10%)	per sheet	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 MA Completion by 7th of every month	per sheet	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

OO2 - Maintenance: — (0 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Complete ≥95% of planned preventative maintenance (PPM) tasks on time	≥95%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR2 Reduce repeat maintenance issues by ≥20%	≥-20% vs baseline	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR3 Achieve zero unplanned restaurant closures due to maintenance failures	0	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR4 Maintain 100% statutory compliance across all sites	100%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 100% Completion of Maintenance Contact Sheets - Proof Required	100%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

OO3 - Supply Chain: 26.7% (3 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Minimise delivery issues with suppliers	≤10	74	0	Jul —, Aug 0	UNDERCOUNT, but already past the last tolerance (40): no pull of the GC answer feed covers 20-22 Sep 2026, and a missing day can only add to a count, so the score stands - one row per delivery/supplier issue form submission in GC Form Task Answers, deduped by FormId, bucketed on the month of its own answer date (min AnsweredDateTime) and attributed to the supplier ANSWERED on the form, falling back to a supplier name found in the free-text issue where the question was left blank. Counts forms RAISED in the month; it says nothing about whether they were closed. — no pull of the answer feed covers 20-22 Sep 2026, so issues raised then are missing and this month is an UNDERCOUNT
KR2 Price change spike (3 items)	≤3	71	0	Jul —, Aug 0	UNDERCOUNT, but already past the last tolerance (5): the weekly report expected around 2026-09-21 was never pulled, and a missing day can only add to a count, so the score stands - 71 distinct supplier pack line(s) rose by 10.0% or more in a single weekly report during September 2026, counted ESTATE-WIDE across 12 named supplier(s) - one count per line per report, each report in the month Kobas emailed it. UNDERCOUNT: the weekly report expected around 2026-09-21 was never pulled, so its rises are missing from this month. Same rule and the same five exclusions as the per-supplier table on the Supply tab, which remains this row's drill-down: a first-ever price ('New'), a move of 100% or more, either side priced 0.00, a line the export holds twice, and a line whose supplier cannot be named (18 qualifying rise(s) in September 2026). Counting items rather than naming suppliers, so the 90% attribution bar that greyed this row until 21/09/2026 no longer applies to it. NOT restricted to recently-ordered ingredients: 'Kobas Orders' keeps only per-order totals, so there is no ingredient-level order line to filter on and every priced ingredient is counted. Matthew's target of 3 was set against three NAMED items, not against an estate-wide count - the two are different measures and the target has not been re-agreed for this one
KR3 Zero menu items unavailable due to supply failure	0	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR4 ≥95% on-time, in-full deliveries	≥95%	94.6%	80	Jul —, Aug —	ISSUE-FREE DELIVERY RATE, and Ross agreed on 21/09/2026 that this IS the definition of this KR, so it is scored. It still cannot observe whether a delivery arrived on time - only whether an issue was filed against that supplier in the same month - so it remains a LOWER BOUND. 15 of 17 suppliers had order-email coverage spanning the month; 168 deliveries on 20-22 Sep 2026 are LEFT OUT - no pull of the issue feed covers those days, so an issue raised then is in no count - and the rate covers the remaining days of the month. Real OTIF needs Mapal Supplier Orders or a Lynas delivery file.
KR5 Monthly Supplier Audit Completion	statement by the 3rd	—	—	Jul —, Aug —	NOT MEASURED: not scored - supplier statements began with Phase 2 in October 2026, so no statement for September 2026 existed by its due date; one was generated retrospectively on 2026-10-11 (https://github.com/MakiManc/ops/blob/main/data/ops_command/supplier_statements/2026-09.md)

OO4 - Logistics: 100% (1 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Zero service disruptions caused by logistics delays (24 hour Max)	0	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR2 5 critical SKUs damaged in transit (Broth and Sauces)	≤5	0+	—	Jul —, Aug —	not scored - an INCOMPLETE month: no pull of the answer feed covers 20-22 Sep 2026, so 0 is only a lower bound - 0 forms matched - the issue form has no damaged-in-transit field; a true zero and a form-design gap look identical. Counted over the 74 delivery/supplier issue form(s) answered in September 2026: 0 named AA Factory as the supplier, and a form counts when its free-text issue mentions damage (damaged, broken, burst, leaking, split, crushed...) AND a broth or sauce line (broth, sauce, tare, soup, dashi). Each form counts once, however many items it lists - the KR's 'SKUs' cannot be read off a free-text form
KR3 ≥95% of deliveries tracked end-to-end (departure → receipt) (KOBAS)	≥95%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

KR	Target	Value	Score	Before	Basis or blocker
KR4 KR: 100% of delivery credit notes and refunds actioned through MAPAL and Finance	100%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 95% Aggregated Supplier perfomance	≥95%	97.3% (mean of 15)	100	Jul —, Aug —	UNWEIGHTED mean of the issue-free delivery rates of the 15 supplier(s) whose Kobas order emails span September 2026 - OO3 KR4's measurability test - each counted once whatever its volume: Lynas 82.6%, Dunster Farm 94.1%, Brakes 94.6%, Boba Box 95.5%, JFC 96.5%, Global Fruits 98.3%, JFE 98.6%, Blue Ocean 100%, F&J Food 100%, FreshFV 100%, Harro 100%, J&S 100%, John Vallance 100%, LWC 100%, Perfect Ted 100%. Left out as not measurable: TWF (order emails start 2026-09-03), Solstice (order emails start 2026-09-16). OO3 KR4's delivery-weighted rate for the same month is 94.6%, because Lynas's volume dominates it. 168 deliveries on 20-22 Sep 2026 are left out of every rate - no pull of the issue feed covers those days. Each rate is max(0, deliveries - issue forms) / deliveries: an issue-free rate, NOT on-time-in-full, and a lower bound. The per-supplier table is the Supply tab's issue-free table

OO5 - Production: 100% (2 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Maintain Pork broth density within 8-9	8-9	8.36 avg - 96.3% of 107 readings in band	100	Jul 100, Aug 100	Mean after-ice refractometer reading for Tonkotsu Broth in September 2026: 8.36 against a band of 8-9, inside band. 103 of 107 reading(s) were individually in band (96.3%), across 29 production day(s), from 'Factory Broth Readings' as at its own pull 2026-10-11. THE SCORE IS ON THE MEAN, which is what the band was agreed against; the in-band percentage is shown beside it because a mean can sit inside band while individual batches miss it in both directions. Readings with no after-ice value, no usable date or a non-numeric value are excluded and never scored as zero, exactly as on the Quality tab
KR2 Maintain Chicken broth density within 5-6	5-6	5.27 avg - 98.8% of 85 readings in band	100	Jul 100, Aug 100	Mean after-ice refractometer reading for Chicken Broth in September 2026: 5.27 against a band of 5-6, inside band. 84 of 85 reading(s) were individually in band (98.8%), across 28 production day(s), from 'Factory Broth Readings' as at its own pull 2026-10-11. THE SCORE IS ON THE MEAN, which is what the band was agreed against; the in-band percentage is shown beside it because a mean can sit inside band while individual batches miss it in both directions. Readings with no after-ice value, no usable date or a non-numeric value are excluded and never scored as zero, exactly as on the Quality tab
KR3 +/-5% Variance on stocktake	+/-5%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR4 Aggregated Weekly Compliance Score	≥95	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 ≥98% of production orders completed in full	≥98%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

OO6 - Frozen Ramen: — (0 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Maintain 100% Supply Chain availibility	100%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR2 98% On time demand creation	98%	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR3 Live inventory of all forzen ramen and all locations	not set	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

KR	Target	Value	Score	Before	Basis or blocker
KR4 Updated Par Levels	not set	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 Seperation of Invoices associated with Frozen Ramen at Factory Level	not set	—	—	Jul —, Aug —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

Supplier statement

September 2026: FINAL, generated 2026-10-11 - https://github.com/MakiManc/ops/blob/main/data/ops_command/supplier_statements/2026-09.md

Gaps (as at this bake)

• 96 open deviations sit on 1 ARCHIVED or DELETED form version(s) in GetCompliant (worst: 'Delivery/Supplier Issue Form' version 34231). They are excluded from the open counts on this dashboard because a retired form version cannot accrue a real backlog - one of them reports 0 deviations raised and 0 forms completed alongside its 96 open. They are still listed on the Compliance tab, flagged. Clearing them is a GetCompliant admin job.

• No pull of the GC answer feed covers 20-22 Sep 2026: each pull reaches back about eight days, and no export ran for longer than that. Delivery/supplier issues raised on those days are in no count, so each month holding one is an UNDERCOUNT (OO3 KR1), and deliveries on those days are left out of the issue-free delivery rate (OO3 KR4) rather than counted as issue-free

• Site broth readings are graded against Ross's SITE band (chicken 6+/-1 i.e. 5-7, tonkotsu 6-7), which is NOT the factory's after-ice band (tonkotsu 8-9, chicken 5-6): same instrument, different point in the broth's life. 2096 of 2520 site readings are in band, 330 below and 94 above

• The factory broth score carries no factory: the refractometer form has no site field, so readings cannot be split between the Glasgow, Edinburgh and Shoreditch factories - an out-of-spec batch cannot be traced to the line that made it

• 58 refractometer response(s) carry no after-ice reading (the form gained that question on 13/08/2025) and are excluded from the factory broth score rather than scored as zero

• 14 refractometer reading(s) are dated from the submission timestamp because the form's own hand-typed Date field either did not parse ('03/08/0025') or contradicted that timestamp - dated after its own submission, or more than 7 days before it - fix at source when possible

• 1 after-ice reading(s) arrived percent-formatted and were converted: '900.00%' is 9, and '8.60%' is a cell holding 0.086 because someone typed 8.6 into a cell already formatted as a percentage - read as 8.6, which is what its 11.4 before-ice reading says it was. Worth clearing the percent formatting on that column at source

• 4 reading(s) were typed with a DECIMAL COMMA ('8,7' for 8.7) and are read as such. Until 28/08/2026 the comma was stripped as a thousands separator, so these read as 87, 80, 80 and 52 and were reported as factory keying slips - they were this builder's bug, not the factory's, and the sheet needs no correction

• Kobas Orders covers 24 supplier(s); 9 supplier(s) the estate orders from send no confirmation email and are therefore ABSENT from projected spend this week: AA Factory1 Limited, DUNNS, ETeaket, Eddies Seafood Market, Hodgson Fish, Kirkstall Brewery, PCY, Shield Foods…. Kobas only emails a confirmation for suppliers configured to receive orders by email - enabling it per supplier in Kobas closes this gap, and this note shrinks as it is done

• 1 weekly ingredient price report(s) were never pulled (expected around 2026-09-21): no export ran to fetch the email that week, and the export keeps only the newest one. Their price rises are missing from the spike counts, so the month each falls in is an undercount

• 46 ingredient price change(s) move by more than 100% up or 50% down (e.g. 2.73 to 65.48). At that size it is a pack or unit re-spec or a keying slip rather than a price rise, so they are listed separately and kept OUT of the settled-increase flag - putting them in would send someone to a supplier over a data-entry error

• The newest pack-price export is 34 days old (2026-09-07). The price report is weekly, so every report since then has no export after it to diff against and falls back to the inferred routes - which is most of what keeps attribution at 74.7% rather than near-complete. A fresh export in Drive is what closes it

• Supplier attribution of price changes is at 74.7% of report rows, under the 90% this system requires before it will name a supplier on a scorecard row, so the per-supplier spike counts stay a drill-down on the Supply tab, not a scored row (OO3 KR2 itself counts lines estate-wide and needs no attribution). This is a COVERAGE limit, not an accuracy one: where a route fires it agrees with the export-diff ground truth every time. Taking the pack-price export weekly, on the price report's own schedule, is what lifts it

• 21 supplier+category+ingredient+pack combination(s) carry more than one live line in the pack-price export, so their price cannot be read off a single record. They are marked duplicate_line wherever they appear and excluded from the spike count. 0 line(s) were collapsed first as punctuated Supplier Code twins (S6005 / S6005.) on an identical pack, which is one Kobas record written twice rather than two prices; a further 7 twin(s) sit on DIFFERENT pack shapes and are counted but deliberately not merged, because there one code has been reused for two real pack sizes and collapsing them would delete a price. Fixing these in Kobas is a stock-data job, not a dashboard one

• Cross-reference site-alias map does not cover every site: 'Maki Manchester NQ', 'Maki West End' appear in Kobas with no GetCompliant match - excluded from cross-referencing until there is evidence for a pairing, never guessed at

• Maintenance Contact List: the 'Glasgow and Edinburgh' tab holds no contact (no row with a number or an email), so M1TOO Ltd, Fountain Good Food Ltd, South Ikigai Ltd, Maki SJQ Ltd, Maki Bath St, Renfield Good Food Ltd are not covered for OO2 KR5

• Maintenance Contact List: no city tab covers Maki Southampton, Maki Birmingham Ltd, so they count as not covered for OO2 KR5

• Flow Certificates exposes no expiry field (certificate_url, module_name, trainee_id only) - statutory expiries are not visible from this feed

• OO1 KR1-KR5, OO2 KR3, OO3 KR3, OO4 KR1 and OO4 KR4 are grey: the 2026 Operations Input sheet has not been read into this repository yet - the latest pull of the Operations Input sheet (2026-10-11 15:28 UTC) failed: HTTP 403 - the Operations Input sheet is not shared with the service account. It is shared to the makiramen.com domain, which does not include a service account; Matthew needs to share it with the service account as Viewer (failing since 2026-10-10)
