Ops OKR pack - October 2026

first edition · generated 2026-11-01 · from snapshot_2026-11-01.json

Operations: 85% (4 of 5 objectives scored; OO1 is Finance's and is excluded)

OO1 - 7% Net Profit: no % published (0 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Actual W/R% (20%)	≤20% of sales	—	—	Aug 0, Sep 0	NOT MEASURED: October 2026's account is read on 07/11/2026, the 7th after the month ends
KR2 Actual FR% (35%)	≤35% of sales	—	—	Aug 100, Sep 100	NOT MEASURED: October 2026's account is read on 07/11/2026, the 7th after the month ends
KR3 Actual V/R% (13%)	≤13% of sales	—	—	Aug 0, Sep 0	NOT MEASURED: October 2026's account is read on 07/11/2026, the 7th after the month ends
KR4 Actual NP% (4-10%)	≥4% of sales	—	—	Aug 100, Sep —	NOT MEASURED: October 2026's account is read on 07/11/2026, the 7th after the month ends
KR5 MA Completion by 7th of every month	complete by the 7th	—	—	Aug —, Sep 0	NOT MEASURED: due by 07/11/2026 - KR5 is judged when Finance's management account is read that day

OO2 - Maintenance: 100% (1 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Complete ≥95% of planned preventative maintenance (PPM) tasks on time	≥95%	—	—	Aug —, Sep —	NOT MEASURED: no reading of the Facilities app is dated 31/10/2026, the month's last day, and a closed month's figure is the app as read on that month's last day (Ross, 12/10/2026) - no bake read the app that day. The month's latest reading, 23/10/2026, is not its last day and is not used
KR2 Reduce repeat maintenance issues by ≥20%	≥-20% vs baseline	0 repeats (19 sites)	100	Aug —, Sep 100	0 repeat maintenance issues in Oct 2026 across 19 sites in the Facilities app's fault log - a month with 0 repeat issues scores 100, green (Ross, 15/10/2026), with no baseline needed. Rule 'second fault report on the same asset at the same site within 60 days (reported→reported); re-report while first still open = chaser, not repeat'; 1 chaser report merged into the fault they chase and not counted as repeats. The app does not say how many faults were logged in the month, so a month in which nothing was logged in the app also reads 0. The fault log starts in Sep 2026 and the rule looks back 60 days, so in Oct 2026 a re-report of a fault first reported before the log began cannot count as a repeat - this 0 cannot include those
KR3 Achieve zero unplanned restaurant closures due to maintenance failures	0	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR4 Maintain 100% statutory compliance across all sites	100%	—	—	Aug —, Sep —	NOT MEASURED: no reading of the Facilities app is dated 31/10/2026, the month's last day, and a closed month's figure is the app as read on that month's last day (Ross, 12/10/2026) - no bake read the app that day. The month's latest reading, 23/10/2026, is not its last day and is not used
KR5 100% Completion of Maintenance Contact Sheets - Proof Required	100%	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

OO3 - Supply Chain: 50% (4 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Minimise delivery issues with suppliers	≤10	65	0	Aug 0, Sep 0	UNDERCOUNT, but already past the last tolerance (40): no pull of the GC answer feed covers 23 Oct 2026, and a missing day can only add to a count, so the score stands - one row per delivery/supplier issue form submission in GC Form Task Answers, deduped by FormId, bucketed on the month of its own answer date (min AnsweredDateTime) and attributed to the supplier ANSWERED on the form, falling back to a supplier name found in the free-text issue where the question was left blank. Counts forms RAISED in the month; it says nothing about whether they were closed. — no pull of the answer feed covers 23 Oct 2026, so issues raised then are missing and this month is an UNDERCOUNT
KR2 Price change spike (3 items)	≤3	67	0	Aug 0, Sep 0	67 distinct supplier pack line(s) rose by 10.0% or more in a single weekly report during October 2026, counted ESTATE-WIDE across 11 named supplier(s) - one count per line per report, each report in the month Kobas emailed it. Same rule and the same five exclusions as the per-supplier table on the Supply tab, which remains this row's drill-down: a first-ever price ('New'), a move of 100% or more, either side priced 0.00, a line the export holds twice, and a line whose supplier cannot be named (29 qualifying rise(s) in October 2026). Counting items rather than naming suppliers, so the 90% attribution bar that greyed this row until 21/09/2026 no longer applies to it. NOT restricted to recently-ordered ingredients: 'Kobas Orders' keeps only per-order totals, so there is no ingredient-level order line to filter on and every priced ingredient is counted. Matthew's target of 3 was set against three NAMED items, not against an estate-wide count - the two are different measures and the target has not been re-agreed for this one
KR3 Zero menu items unavailable due to supply failure	0	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR4 ≥95% on-time, in-full deliveries	≥95%	96.6%	100	Aug —, Sep 80	ISSUE-FREE DELIVERY RATE, and Ross agreed on 21/09/2026 that this IS the definition of this KR, so it is scored. It still cannot observe whether a delivery arrived on time - only whether an issue was filed against that supplier in the same month - so it remains a LOWER BOUND. 17 of 18 suppliers had order-email coverage spanning the month; 80 deliveries on 23 Oct 2026 are LEFT OUT - no pull of the issue feed covers those days, so an issue raised then is in no count - and the rate covers the remaining days of the month. Real OTIF needs Mapal Supplier Orders or a Lynas delivery file.
KR5 Monthly Supplier Audit Completion	statement by the 3rd	day 1 (1 Nov)	100	Aug —, Sep —	October 2026's supplier statement was generated on 2026-11-01, day 1 of November 2026 - 100 by the 3rd, 50 by the 10th, 0 after. It is FINAL: 65 issue form(s) naming 9 supplier(s) (https://github.com/MakiManc/ops/blob/main/data/ops_command/supplier_statements/2026-10.md)

OO4 - Logistics: 100% (1 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Zero service disruptions caused by logistics delays (24 hour Max)	0	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR2 5 critical SKUs damaged in transit (Broth and Sauces)	≤5	0+	—	Aug —, Sep —	not scored - an INCOMPLETE month: no pull of the answer feed covers 23 Oct 2026, so 0 is only a lower bound - 0 forms matched - the issue form has no damaged-in-transit field; a true zero and a form-design gap look identical. Counted over the 65 delivery/supplier issue form(s) answered in October 2026: 34 named AA Factory or Lynas as the supplier - Lynas carries the factory's broths and sauces to the sites, so damage to them is filed against Lynas (Ross, 11/10/2026: count it) - and a form counts when its free-text issue mentions damage (damaged, broken, burst, leaking, split, crushed...) AND a broth or sauce line (broth, sauce, tare, soup, dashi). Each form counts once, however many items it lists - the KR's 'SKUs' cannot be read off a free-text form. NOT COUNTED: 1 form(s) naming another supplier (or none) describe broth or sauce damage - a bought-in product, not a factory line: 2026-10-22 JFC
KR3 ≥95% of deliveries tracked end-to-end (departure → receipt) (KOBAS)	≥95%	—	—	Aug —, Sep —	NOT MEASURED: no supplier order due in October 2026 can be judged - the deliveries report covers 0 of October 2026's 31 days (its newest covered day is 19/08/2026); 1894 order(s) emailed. 1894 order(s) not judged: their window runs past 19/08/2026, the last day any copy of the report covers. Kobas needs to email the deliveries report DAILY, with 'Ops Deliveries' in its subject and no '[TEST]' (the export skips test sends), over a rolling window of at least 7 days.

KR	Target	Value	Score	Before	Basis or blocker
KR4 KR: 100% of delivery credit notes and refunds actioned through MAPAL and Finance	100%	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 95% Aggregated Supplier perfomance	≥95%	98.0% (mean of 17)	100	Aug —, Sep 100	UNWEIGHTED mean of the issue-free delivery rates of the 17 supplier(s) whose Kobas order emails span October 2026 - OO3 KR4's measurability test - each counted once whatever its volume: Lynas 87.8%, JFC 93.2%, Dunster Farm 94.4%, Brakes 96.5%, Solstice 97.2%, TWF 98.5%, JFE 99%, LWC 99.4%, Blue Ocean 100%, Boba Box 100%, F&J Food 100%, FreshFV 100%, Global Fruits 100%, Harro 100%, J&S 100%, John Vallance 100%, Perfect Ted 100%. Left out as not measurable: AA Factory (no Kobas order emails). OO3 KR4's delivery-weighted rate for the same month is 96.6%, because Lynas's volume dominates it. 80 deliveries on 23 Oct 2026 are left out of every rate - no pull of the issue feed covers those days. Each rate is max(0, deliveries - issue forms) / deliveries: an issue-free rate, NOT on-time-in-full, and a lower bound. The per-supplier table is the Supply tab's issue-free table

OO5 - Production: 90% (2 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Maintain Pork broth density within 8-9	6-7 from 12/10/2026 (8-9 before)	6.52 avg from 12/10 · 7.62 to 11/10 - 83.5% of 103 in band	80	Aug 100, Sep 100	The factory's after-ice band for Tonkotsu Broth CHANGED during October 2026 - 8-9 to 11/10/2026 (Ross, 27/08/2026), 6-7 from 12/10/2026 (Ross, 12/10/2026) - so the month is split at the change and each part is averaged against its own band: 41 reading(s) to 11/10 averaged 7.62 against 8-9, 0.38 outside band; 62 reading(s) from 12/10 averaged 6.52 against 6-7, inside band. The month is scored on the distance outside band weighted by each part's readings, 0.1513 - in a month with one band this is simply its mean against its band - and the value shown is the newest part's mean, under the newer band in force in October 2026. 86 of 103 reading(s) were individually in band, each against the band in force on its own date (83.5%), across 30 production day(s), from 'Factory Broth Readings' as at its own pull 2026-11-01. THE SCORE IS ON EACH PART'S MEAN against its own band, which is what each band was agreed against; the in-band percentage is shown beside it because a mean can sit inside band while individual batches miss it in both directions. Readings with no after-ice value, no usable date or a non-numeric value are excluded and never scored as zero, exactly as on the Quality tab. The KR's wording is Matthew's sheet's, verbatim ('KR1: Maintain Pork broth density within 8-9'); the factory band in force this month was moved by Ross, 12/10/2026
KR2 Maintain Chicken broth density within 5-6	5-6	5.31 avg - 100.0% of 112 readings in band	100	Aug 100, Sep 100	Mean after-ice refractometer reading for Chicken Broth in October 2026: 5.31 against a band of 5-6, inside band. 112 of 112 reading(s) were individually in band (100.0%), across 29 production day(s), from 'Factory Broth Readings' as at its own pull 2026-11-01. THE SCORE IS ON THE MEAN, which is what the band was agreed against; the in-band percentage is shown beside it because a mean can sit inside band while individual batches miss it in both directions. Readings with no after-ice value, no usable date or a non-numeric value are excluded and never scored as zero, exactly as on the Quality tab
KR3 +/-5% Variance on stocktake	+/-5%	3.10% (worst -4.90%) - 3 of 4 weeks	—	Aug 100, Sep 100	not scored - an INCOMPLETE month: w/c 26/10/2026 is not entered, so 3 of 4 weeks are known - Mean ABSOLUTE weekly stocktake variance over the 3 week(s) commencing in October 2026: w/c 05/10 -4.40%, w/c 12/10 -4.90%, w/c 19/10 0.00%. Worst week: w/c 12/10/2026 at -4.90%. Signed mean -3.10%. From the factory's Weekly Report workbook, tab 'STOCK TAKE VARIANCE - WEEKLY' (read 2026-11-01): one factory-wide figure per week, for the one factory the workbook covers (AA Factory1 Limited). The sheet does not say whether a negative variance is a loss or a gain, so the band scores its SIZE. A closed month is scored only when every week commencing in it is entered

KR	Target	Value	Score	Before	Basis or blocker
KR4 Aggregated Weekly Compliance Score	≥95	93.3% (976 of 1046) - 30 of 31 days	—	Aug —, Sep —	not scored - an INCOMPLETE month: no pull of the feed covers 23/10, so 30 of 31 days are counted - 976 of 1046 scheduled tasks at AA Factory1 Limited due in October 2026 were done on time. Days with tasks missed, most first: 16/10 52 of 52 (nothing done), 15/10 18 of 35; 1 whole day(s) with nothing done count as missed. 30 day(s) covered. Scheduled GetCompliant tasks at AA Factory1 Limited only (Ross, 12/10/2026 - 'AA Factory' tasks set up at other locations are not counted): a task is ON TIME when GetCompliant's own flag says it was done by its due time, and every other task due counts as missed - whole days with nothing done included (Ross, 12/10/2026). Each task counted once across every pull of the feed, by its due date. The sheet words this KR 'Aggregated Weekly Compliance Score'; it is measured as the month's on-time % (Phase 3 brief). A closed month is scored only when a pull covers every one of its days
KR5 ≥98% of production orders completed in full	≥98%	98.3% (58 of 59) - JFC 5 of 5	—	Aug —, Sep —	not scored - an INCOMPLETE month: 1 JFC PO(s) collected in October 2026 have not had 7 days for JFC to report in the replies read (2026-11-01); the factory's CLOSING INVENTORY sheet reaches only 2026-10-14; no pull of the issue-form feed covers 23/10, so 98.3% is partial - the missing part could move it either way - 58 of 59 production order(s) in October 2026 completed in full. (a) 5 JFC PO(s) collected in October 2026, 5 in full: PO UK 16317 (collected 01/10); PO UK 16378 (collected 08/10); PO UK 16420 (collected 15/10); PO UK 16475 (collected 22/10); PO UK 16517 (emailed 23/10, collection day not stated); AWAITING JFC'S REPORT, not counted: PO UK 16518 (collected 29/10) - JFC's replies as read on 2026-11-01. (c) 54 site order(s) on the factory across 11 day(s) of its CLOSING INVENTORY sheet (read 2026-11-01): NOT IN FULL - Maki & Ramen - Maki Manchester 11/10 (issue form naming the factory on 15/10). An order is in full unless JFC's replies in its PO thread report a short or damaged line naming a product or quantity (extra cartons are not a failure), counted once JFC has had 7 days to report; or - for a site's order - an issue form names the factory at that site, charged to the site's latest order on or before the form's date, since the sheet records the day an order is logged, not a delivery date. No issue form has ever named the factory (GetCompliant's Supplier? list does not offer it), so (c) fails only if that changes; orders from Maki & Ramen - Maki Leith, Maki & Ramen - Maki Manchester NQ, Maki & Ramen - Maki West End can never fail - no GetCompliant location files issue forms for them. (b) Lynas's POs on the factory are NOT counted: they go to the factory's own mailbox, not the one this system reads

OO6 - Frozen Ramen: — (0 of 5 KRs scored)

KR	Target	Value	Score	Before	Basis or blocker
KR1 Maintain 100% Supply Chain availibility	100%	—	—	Aug —, Sep —	NOT MEASURED: the 2026 Operations Input sheet has not been read into this repository yet - the latest pull of the Operations Input sheet (2026-11-01 15:31 UTC) failed: HTTP 403 - the Operations Input sheet is not shared with the service account. It is shared to the makiramen.com domain, which does not include a service account; Matthew needs to share it with the service account as Viewer (failing since 2026-10-10) REFERENCE, NOT SCORED - Frozen ramen on issue forms (reference, not scored): 5+ (5 delivery/supplier issue form(s) answered in October 2026 mention frozen ramen: 08/10 Fountain Good Food Ltd (Lynas); 09/10 Maki Leicester Ltd (JFC); 09/10 Maki NE1 Ltd (Lynas); 12/10 Maki Lakeside (JFC); 25/10 Maki Lakeside (JFC). The answer feed covers 30 day(s) of the month (no pull covers 23/10), so this is a lower bound. For reference beside the KR, which is Matthew's typed availability %: it is never scored, and a form is not proof an item was unavailable)

KR	Target	Value	Score	Before	Basis or blocker
KR2 98% On time demand creation	98%	—	—	Aug —, Sep —	NOT MEASURED: not scored - whether every JFC PO collected in October 2026 was invoiced is not known: the 2026 Operations Input sheet has not been read into this repository yet - the latest pull of the Operations Input sheet (2026-11-01 15:31 UTC) failed: HTTP 403 - the Operations Input sheet is not shared with the service account. It is shared to the makiramen.com domain, which does not include a service account; Matthew needs to share it with the service account as Viewer (failing since 2026-10-10). So far: 5 JFC PO(s) collected in October 2026 with an outcome, 5 in full: PO UK 16317 (collected 01/10); PO UK 16378 (collected 08/10); PO UK 16420 (collected 15/10); PO UK 16475 (collected 22/10); PO UK 16517 (emailed 23/10, collection day not stated); AWAITING JFC'S REPORT, not counted: PO UK 16518 (collected 29/10) - JFC's replies as read on 2026-11-01; and 1 JFC PO(s) collected in October 2026 have not had 7 days for JFC to report in the replies read (2026-11-01)
KR3 Live inventory of all forzen ramen and all locations	100%	—	—	Aug —, Sep —	NOT MEASURED: no stock count report read for any week commencing in October 2026
KR4 Updated Par Levels	not set	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month
KR5 Seperation of Invoices associated with Frozen Ramen at Factory Level	not set	—	—	Aug —, Sep —	NOT MEASURED: current state only - this KR has no monthly form, so it has no value for a closed month

Supplier statement

October 2026: FINAL, generated 2026-11-01 - https://github.com/MakiManc/ops/blob/main/data/ops_command/supplier_statements/2026-10.md

Gaps (as at this bake)

• sites with no AM region in SITE_REGIONS (they appear under the All filter only until the builder map is updated): Maki Northern Quarter

• 96 open deviations sit on 1 ARCHIVED or DELETED form version(s) in GetCompliant (worst: 'Delivery/Supplier Issue Form' version 34231). They are excluded from the open counts on this dashboard because a retired form version cannot accrue a real backlog - one of them reports 0 deviations raised and 0 forms completed alongside its 96 open. They are still listed on the Compliance tab, flagged. Clearing them is a GetCompliant admin job.

• No pull of the GC answer feed covers 20-22 Sep 2026, 23 Oct 2026: each pull reaches back about eight days, and no export ran for longer than that. Delivery/supplier issues raised on those days are in no count, so each month holding one is an UNDERCOUNT (OO3 KR1), and deliveries on those days are left out of the issue-free delivery rate (OO3 KR4) rather than counted as issue-free

• Site broth readings are graded against Ross's SITE band (chicken 6+/-1 i.e. 5-7, tonkotsu 6-7), which is NOT the factory's after-ice band (tonkotsu 8-9 to 11/10/2026, 6-7 from 12/10/2026, chicken 5-6): same instrument, different point in the broth's life, set separately even where the numbers match. 2662 of 3292 site readings are in band, 526 below and 104 above

• The factory broth score carries no factory: the refractometer form has no site field, so readings cannot be split between the Glasgow, Edinburgh and Shoreditch factories - an out-of-spec batch cannot be traced to the line that made it

• 58 refractometer response(s) carry no after-ice reading (the form gained that question on 13/08/2025) and are excluded from the factory broth score rather than scored as zero

• 14 refractometer reading(s) are dated from the submission timestamp because the form's own hand-typed Date field either did not parse ('03/08/0025') or contradicted that timestamp - dated after its own submission, or more than 7 days before it - fix at source when possible

• 1 after-ice reading(s) arrived percent-formatted and were converted: '900.00%' is 9, and '8.60%' is a cell holding 0.086 because someone typed 8.6 into a cell already formatted as a percentage - read as 8.6, which is what its 11.4 before-ice reading says it was. Worth clearing the percent formatting on that column at source

• 4 reading(s) were typed with a DECIMAL COMMA ('8,7' for 8.7) and are read as such. Until 28/08/2026 the comma was stripped as a thousands separator, so these read as 87, 80, 80 and 52 and were reported as factory keying slips - they were this builder's bug, not the factory's, and the sheet needs no correction

• Kobas Orders covers 24 supplier(s); 9 supplier(s) the estate orders from send no confirmation email and are therefore ABSENT from projected spend this week: AA Factory1 Limited, DUNNS, ETeaket, Eddies Seafood Market, Hodgson Fish, Kirkstall Brewery, PCY, Shield Foods…. Kobas only emails a confirmation for suppliers configured to receive orders by email - enabling it per supplier in Kobas closes this gap, and this note shrinks as it is done

• 1 weekly ingredient price report(s) were never pulled (expected around 2026-09-21): no export ran to fetch the email that week, and the export keeps only the newest one. Their price rises are missing from the spike counts, so the month each falls in is an undercount

• 59 ingredient price change(s) move by more than 100% up or 50% down (e.g. 2.73 to 65.48). At that size it is a pack or unit re-spec or a keying slip rather than a price rise, so they are listed separately and kept OUT of the settled-increase flag - putting them in would send someone to a supplier over a data-entry error

• The newest pack-price export is 55 days old (2026-09-07). The price report is weekly, so every report since then has no export after it to diff against and falls back to the inferred routes - which is most of what keeps attribution at 73.1% rather than near-complete. A fresh export in Drive is what closes it

• Supplier attribution of price changes is at 73.1% of report rows, under the 90% this system requires before it will name a supplier on a scorecard row, so the per-supplier spike counts stay a drill-down on the Supply tab, not a scored row (OO3 KR2 itself counts lines estate-wide and needs no attribution). This is a COVERAGE limit, not an accuracy one: where a route fires it agrees with the export-diff ground truth every time. Taking the pack-price export weekly, on the price report's own schedule, is what lifts it

• 21 supplier+category+ingredient+pack combination(s) carry more than one live line in the pack-price export, so their price cannot be read off a single record. They are marked duplicate_line wherever they appear and excluded from the spike count. 0 line(s) were collapsed first as punctuated Supplier Code twins (S6005 / S6005.) on an identical pack, which is one Kobas record written twice rather than two prices; a further 7 twin(s) sit on DIFFERENT pack shapes and are counted but deliberately not merged, because there one code has been reused for two real pack sizes and collapsing them would delete a price. Fixing these in Kobas is a stock-data job, not a dashboard one

• Cross-reference site-alias map does not cover every site: 'Maki Manchester NQ', 'Maki West End' appear in Kobas with no GetCompliant match - excluded from cross-referencing until there is evidence for a pairing, never guessed at

• OO2 KR4 still counts grease-trap servicing, which Ross's rule (09/10/2026) leaves out: the Facilities feed sends totals only - the app needs to send group.grease_traps (tasks, current, due30, overdue, no_evidence)

• Maintenance Contact List: the 'Glasgow and Edinburgh' tab holds no contact (no row with a number or an email), so M1TOO Ltd, Fountain Good Food Ltd, South Ikigai Ltd, Maki SJQ Ltd, Maki Bath St, Renfield Good Food Ltd are not covered for OO2 KR5

• Maintenance Contact List: no city tab covers Maki Southampton, Maki Birmingham Ltd, so they count as not covered for OO2 KR5

• Flow Certificates exposes no expiry field (certificate_url, module_name, trainee_id only) - statutory expiries are not visible from this feed

• OO4 KR3: the newest Kobas deliveries report covers goods-ins to 19/08/2026 only - Kobas needs to email the deliveries report DAILY, with 'Ops Deliveries' in its subject and no '[TEST]' (the export skips test sends), over a rolling window of at least 7 days

• OO5 KR4: no pull of the 'GC Scheduled Task Answers' feed covers 20/09/2026, 21/09/2026, 22/09/2026, 23/10/2026 - the factory's scheduled tasks due on those days are in no count, so a closed month holding one is not scored

• OO2 KR3, OO3 KR3, OO4 KR1, OO4 KR4 and OO6 KR1 are grey: the 2026 Operations Input sheet has not been read into this repository yet - the latest pull of the Operations Input sheet (2026-11-01 15:31 UTC) failed: HTTP 403 - the Operations Input sheet is not shared with the service account. It is shared to the makiramen.com domain, which does not include a service account; Matthew needs to share it with the service account as Viewer (failing since 2026-10-10)

• OO6 KR3: a stock count report in the folder, saved 26/10/2026, could not be read - a report has no header row naming a location, an item and a count column (missing: location, count) - so any week only it holds is not counted
